ABOUT ME

As a tech enthusiast based in Ahmedabad, India, I specialize in the MERN stack, combining expertise in Nextjs, React, Node.js.Proficient in TypeScript, Python, my focus on DSA and fast learning ensures optimal solutions.

EXPERIENCE

Ekaantik - Backend Developer Intern

May, 2024 - Present

Currently i am working as a Backend developer intern at a esteemed organisation working on projects involving JAVA , springboot etc. I am actively working on projects that are shipped to production into real world. Worked on various projects that were up to industry standards.

Void Star India - Software Developer Intern

May, 2023 - July, 2023

During my internship i was tasked with making a API caching Software for the company which took the fetching time to less than 100ms. This Software used Graphql and Grafbase to manage caching of API once they were called, if the API was cached before it doesn't have to request again saving cost and time. I used Javascript,Nodejs and MongoDB in the backend. It also has autodelete for time set by admin feature where custom timing can be set so that data is always fresh and up-to-date.

PROJECTS

CFassist - AI Visual assistant

Next.js,Typescript ,Nodejs, Mongodb, Express, Cloudflare AI models

An application that creates course for you by uploading syllabus image and with just one click, also contains in-app AI chatbot.All made using Microsoft Azure AI service. Website was made using Nextjs,Typescript and backend is made of Nodejs , Mongodb.
